### The Invisible Effect of Inferior Fuel on Your Car

Nothing can cause as much damage to your car-and ofttimes this inferior fuel is the direct reason for the general breakdown of your entire car. Before it costs you more—change your motor fuel and

The severest weather offers no limitations to "LIGHTNING" - it keeps your motor purring evenly, without the least bit of harm to the keeps your motor purring evenly, without the least bit of harm to the mechanism and construction of your car. "LIGHTNING" is no sluggard though, and when you want plenty of "pep" it is "right on the job"—but still mindful of your car and its inner works.

Let's get away from frequent motor troubles that can easily be avoided with the constant use of "LIGHTNING"—a motor fuel that can be depended upon to give all and take positively nothing.

### ARMY AND NAVY NEWS

THE ARMY

Unfortunately, for a number of months after the war it was not the policy of the War Department to commission in the reserve corps any man who had not been an officer during the war. Due to early misinterpretation and misunderstandings, now being corrected, former regulations concerning the appointment of reserve effects in the infantry, cavalry, etc., effected an adverse influence on the enrollment in engineer and other sections of the reserve corps.

It is stated on good authority that in one battallon of the 22d Engineers, which served in the A. E. F., 60 per cent of the enlisted much of the commissions, but voluntarily enlisted in lower grades and remained awrent in the lower grades and remained awrent in the last engines of the first expeditionary features and the week of the first expeditionary features and the war of the control of the enlisted much and the part of the convoy of the first dependence on the control of the enlisted much provided the first expeditionary features and the war of the convoy of the first dependence on the control of the enlisted much provided the first expeditionary features and the war of the convoy of the first dependence on the control of the enlisted much provided the convoy of the first dependence on the convoy of the first dependence on the convoy of the first dependence on the first dependence on the convoy of the first dependence on the first dependence

France.

Through the efforts of the Society of American Military Engineers the assistant chief of staff of the Army in a recent memorandum on the subject is of the opinion that former en-

of American Military Engineers the assistant their of staff of the Army in a recent memorandum on the subject is of the opinion that former enlisted men of the engineers, by reason of their technical qualifications and actual experience in war, should be enrolled in the reserve corps. "They should," he avers, "be brought in now in order that their knowledge may keep pace with new developments, and in order also that their interest, influence and experience may be of use in enrolling and training others."

In the opinion of a lieutenant colonel who served overseas as an emergency engineer officer, it would seem that the interests of national defense can best be served for the next ten years at least by enrolling these men as officers in grades commens rate with their technical qualifications, their military experience and age. Such action, he avers, "will in a measure secure for them rewards for service actually rendered in war and will not interfere with the enrollment as second lieutenants, graduating from R. O. T. C. units with no actual experience."

Based upon the project for six field armies, including the requirements of the communications zone of the interior, in line with the present plan of allowing the Regular Army, the National Guard and the reserve corps, there are not 4,000 enrolled. Therefore it is advocated the enrollment of all persons qualified for service should be encouraged to the fullest possible extent.

New Type Ammunition.

Air Service.

Assignment of available reserve air efficers has been made in the 90th division, organized reserves, El Paso, Tex. Reserve pilots in that vicinity are preparing to stimulate interest in aviation by recruiting former air service mechanics as a nucleus for a live organization to be kept ready for action.

New classes in advance training for students and cadets are under way at Ellington and Kelly fields, there being ten pursuit and seven bombardment students enrolled. Airplane pilot rating has been received by all members of previous classes, and many new wings adorn the breasts of recent graduates in recognition of proven ability.

The state of Indiana has leased a new armory in Kokomo, to be jointly used by the 137th observation squadron, air service, and battery A of the field artillery, Indiana National Guard. Much interest has been aroused in the two new hangars at the flying field, which is well marked and easily approached. Many new names have recently been added to the air squadron units.

Excitement prevailed at Cressy Field recently when the United States transport Dix grounded on Alcatraz Island, which is just opposite the field, and on which is located the United States disciplinary barracks. Photo section No. 15, in accordance with its tradition, lost no time in getting a most exceptional photograph of the distressed transport. The photo plane took off, circled the Dix, and within an hour after making a landing the San Francisco papers credited Cressy Field for a picture of the scene that adorned the front page.

Graduating exercises were held at the school for flight surgeons at the medical research laboratory on January 21, 1922. Dr. E. C. Schneider, director of the department of physiology and one of the pioneer workers in aviation medicine, addressed the class. Maj. W. R. Weaver, commanding officer of Mitchell Frield, presented the class with their certificates. The graduates were Capt. Lyle C. White, honor graduate; Maj. Cadmus J. Baker and Capts. Luther H. Rice, Shores E. Clinard and Bernard L. Jarman.
